

Steps to create certificate.

lets create a folder: `mkdir ramya-user && cd ramya-user`

Generate a key using openssl : `openssl genrsa -out ramya.key 2048`

Generate a Client Sign Request (CSR) : `openssl req -new -key ramya.key -out ramya.csr -subj "/CN=ramya/O=group1"`

Generate the certificate (CRT): `openssl x509 -req -in ramya.csr -CA ~/.minikube/ca.crt -CAkey ~/.minikube/ca.key -CAcreateserial -out ramya.crt -days 500`

Steps to create user.

lets create a user: `kubectl config set-credentials ramya --client-certificate=ramya.crt --client-key=ramya.key`

Set a context entry in kubeconfig: `kubectl config set-context my-context --cluster=minikube --user=ramya`

Switch to user: `kubectl config use-context contextNmae`
